

Create deck → Add manually → **Add with AI** → Edit & finalise

Add a visualisation (with the AI Assistant)

Activity · Slide Decks · ~15 min

BEFORE YOU START

- ☐ You've created your slide deck and added a visualisation manually (see prior activities)
- ☐ You have at least one saved visualisation in the **Visualisations** tab
- ☐ The AI Assistant panel is open

What you'll do

Use the AI Assistant to surface a saved visualisation and add it directly to your slide deck — no menu navigation needed. Your facilitator has just demonstrated this; now do it yourself.

Steps

1. In the AI Assistant, type a prompt naming one of **your** saved visualisations: *Display [your visualisation name]*.
2. The AI finds the chart and shows a preview in the chat.
3. Below the preview, look for the button to **add the chart to a slide deck** — pick the deck you created.
4. Save.

No saved chart of your own yet? Use this shared example prompt instead: *Display the quarterly change in service volume visualisation.*

The screenshot shows the FASTR AI Assistant interface. On the left, there's a slide preview titled 'New slide' with the subtitle 'ANC1 Actual vs Expected Service Volume (National)'. The slide content area shows a line chart with a red shaded area. On the right, the AI Assistant chat panel is open, showing a conversation with the AI. The chat history includes prompts like 'Add the ANC1 actual vs expected service volume (National) chart to this slide.' and 'Let me first check the current state of the slide and find the right visualization/metric to use.' The AI responds with 'Retrieved slide' and 'Retrieved 36 metric(s)'. The user then asks for the metric, and the AI responds with 'I can see the metric I need: m3-02-01 (Actual vs expected service volume [National]) with the disruption-chart preset. Let me also check the module settings to confirm the right count variable, and I'll get the metric data to confirm ANC1 is available.' The user then asks for the data, and the AI responds with 'Retrieved data for metric m3-02-01'. The user confirms the data and asks the AI to update the slide. The AI responds with 'Updated 1 field(s)' and 'The ANC1 Actual vs Expected Service Volume (National) chart has been added to the slide. It uses the disruptions-and-surpluses chart preset, filtered to ANC1, showing actual vs model-predicted expected volumes over time (Jan 2022 - Apr 2025). Click Save when you're happy with it!'. At the bottom of the chat panel, there's a text input field with the placeholder 'Ask about this slide...' and a 'Submit' button.

Checkpoint

Your deck should now have **two slides**: one chart added manually (previous activity), one added via the AI Assistant. They can be the same chart or different — the point is you've used both paths.

Comparing the two paths

Manual path	AI Assistant path
Browse → Select → Insert	Prompt → Click "Add to deck"
Useful when you know exactly which chart you want	Useful when you don't remember the name or want the AI to surface candidates
One chart at a time	Can ask for multiple charts in one prompt

Neither is "better." Pick whichever feels faster for the task.

Tips

The AI sees what you've saved. If a chart isn't in your saved Visualisations, the AI won't find it. Save first, then prompt.

- If the AI returns the wrong chart: name the chart more specifically in your prompt, or include the indicator + region in the request.
- If the **Add to deck** button doesn't appear: the AI didn't recognise the response as a chart-add request. Try rephrasing (*"Add the ANC1 chart to my deck"*).

What's next

Move on to **Edit and finalise your slides** — review and polish what you've built.

 **Verify in your current UI:** the AI chat preview controls may differ. The action (prompt → preview → add to deck) is the same.
