Verify the AI output

Activity · Disruption Report · ~20 min

WHY THIS MATTERS

The AI Assistant can generate a complete disruption report in 5–10 minutes. **You** sign off on it. The AI can sound confident and still be wrong — about a number, a region name, an indicator grouping, a comparison.

THE CORE RULE

Every claim in the report must be checkable against the underlying chart or table. If you cannot trace a sentence back to data, flag it.

Two passes to verify

Verification has two passes, and you need **both**:

- 1. Pass 1 — AI self-review.** Run **Prompt 5: Review slide deck** so the AI checks its own output against the data.
- 2. Pass 2 — Team review.** The AI cannot catch everything. The team runs the manual checklist below.

Pass 1 — Run the AI review (Prompt 5)

Once the report is generated, open the prompt library and run **Prompt 5: Review slide deck**. The AI goes through every slide in one pass and checks six things:

#	What Prompt 5 checks
1	Data accuracy — every number in the text matches the underlying data; unverifiable stats are flagged <code>[UNVERIFIED]</code>
2	Indicator names & direction — names match the platform labels; service indicators up = good, mortality up = bad, not mixed up
3	Acronyms & methodology — any acronym expansion or methodology description is verified against the official docs
4	Language & framing — no causal claims, appropriate hedging, no overgeneralisation
5	Consistency across slides — same indicator shows the same value everywhere; names and periods consistent
6	Word count — each text block within target range

What you get back: a summary — “*[X] slides reviewed, [Y] issues found across [Z] slides*” — with a suggested fix per issue. You choose: fix all automatically, review one by one, or done.

Pass 1 catches mechanical errors. But it only checks the deck against itself and the data. It is the start of verification, not the end.

Pass 2 — Team review

Prompt 5 cannot know things only your country team knows. **It cannot tell:**

- whether the indicator **groupings make sense** for your country
- whether a "disruption" is **real or explained** by a known local event (a strike, a campaign, a stock-out)
- whether the **so-what is realistic** and actionable in your context
- whether **local context** is missing

Work through the checklist below **as a team**, with the source charts open on the platform next to the report.

Before you start the team review:

- ☐ Prompt 5 has been run and its flagged issues fixed
- ☐ Your country team is together — this is a team activity, not solo
- ☐ The source charts are open on the platform, next to the report

General checks — every report

☐	Check	Notes
☐	All slides generated — none missing, none half-rendered	
☐	The country name is correct and consistent on every slide	
☐	The analysis period is correct on every chart	
☐	No placeholder text left behind — e.g. [COUNTRY] , [UNVERIFIED]	
☐	The last page (FASTR link / closing slide) is genuinely the last slide	

Base disruption report — Prompt 1

☐	Check	Notes
☐	Cover page — country, subtitle, and date all correct	
☐	The indicator groupings match what you confirmed in the chat	
☐	Each group has its own analysis slide — none merged, none dropped	
☐	Charts load and show data — no blank or broken charts	
☐	Each interpretation matches the chart on that slide	
☐	Titles are findings, not just indicator names — "ANC1 fell 12% in the North", not "ANC1 results"	
☐	Does the so-what make sense for your country? Is it actionable?	

If a check fails: for placeholders or structure, ask the AI to regenerate the named slide. For a wrong interpretation: *"Slide 6 says volumes rose — the chart shows a fall. Please re-check."*

Final team read-through

Once every section passes, **read every interpretation together as a team** — each team member taking a section, the rest following along. Watch for:

- **Anything that reads wrong** — a number too round, a trend that's not in the chart
- **Anything exaggerated** — "dramatic", "alarming", "unprecedented" without evidence
- **Anything generic** — sentences that could apply to any country, not yours
- **Missing local context** — the strike, the supply-chain issue, the new policy. You add it.

If anyone on the team hesitates on a sentence, **flag it**. Hesitation usually means something is off.

Sign-off

Before moving to refine, the team must be able to say:

"Prompt 5 has been run and its issues fixed. Every number is checkable. Every interpretation reflects what we know. No sentence is generic. No claim is unsupported."

What's next

Refine — apply your formatting and, if useful, add regional or data-quality sections with Prompt 2 and Prompt 3.
