

Country action plan

Activity · Results Communication · ~30 min

Before you start

- ☐ You've worked through the previous activities (user mapping, finding statements, linking to actions)
- ☐ You have the workshop output (chart, deck, brief) you produced this week available for reference
- ☐ Your country team is together — this activity benefits from multiple perspectives

Why this matters

FASTR isn't a one-off analysis. It's a **rhythm** — quarterly analyses, regular dissemination, follow-up, capacity strengthening over time. This activity turns "we did a workshop" into "we have a plan for how this continues".

Three questions you'll answer:

- 1. What's the analysis cadence?** Who runs it, when, how often?
- 2. Where does the output go?** Which forums or platforms will FASTR feed into?
- 3. What does the team need?** Training, tools, or support that's not yet in place.

The worksheet

Fill in the action plan table:

Action step	Responsible person	Timeline	Success metric
Complete quarterly FASTR analysis			
Disseminate to [forum]			
Follow up on identified issues			
Train additional team members			
FASTR · Results Communication			

Use the blank rows for any country-specific steps — e.g., "integrate FASTR output into the quarterly review meeting". "establish a data quality working group".

Three guiding questions

Use these to pressure-test the rows in your action plan:

1. Existing forums

What existing platform or forum will you integrate FASTR into?

Don't create a new meeting. Plug FASTR into something that already happens — monthly directorate meeting, quarterly programme review, technical working group. The rhythm comes for free that way.

2. Dissemination of this week's output

What's your dissemination plan for the output you created this week?

Be specific: who receives it, in what format, by what date. If the answer is "we'll figure it out later", that's the same as "it won't happen".

3. Support from facilitators

What support do you need from facilitators over the next quarter?

Concrete asks beat vague ones. "We need help configuring the disruption module" is actionable. "We need help" is not.

Worked example: a Country B plan

Action step	Who	When	Success metric
Complete Q2 2026 FASTR analysis	Data Manager + Analyst (M&E unit)	By 15 July	DQA report + service utilization output produced
Present at monthly Directorate meeting	Data Manager	First meeting after analysis	Director presents findings; at least one action assigned
Follow up on identified issues with district teams	M&E unit + relevant programme officers	Within 30 days of dissemination	Action log updated; supervision visits planned
Train 2 more team members in FASTR	Country focal point	Before Q3 analysis	Two new team members run an analysis end-to-end

Peer review

Trade plans with another country team. Look for:

- **Realistic timelines** — does the plan over-commit to the first quarter?
- **Named owners** — does every row have a specific person, not a department?
- **A clear feedback loop** — what happens when an action doesn't get done? Is there a follow-up mechanism?

What's next

This plan is the bridge between **the workshop** and **everyday practice**. Keep it visible — pin it where your team works, review it at the start of each quarter, update it as reality reveals what works.

Setup is done. The work begins now.
