Create your first slide deck

Activity · Slide Decks · ~10 min

BEFORE YOU START

☐ You're signed in to your country's project on the FASTR platform

☐ You've created your personal folder (see *Create your user folder*)

☐ You have at least one visualization saved that you'd like to use (see *Creating visualizations*)

What you'll do

Create your first slide deck and add a content slide. This is the container — the next activities fill it with charts and interpretation.

1 Open the Products tab

Go to the **Products** tab on the project's home screen. Slide decks, reports, and visualizations all appear as cards there.

2 Create the deck

Click **New**, then choose **New deck**. A dialog asks for a name, a folder, a results package, and a scope. Name it (e.g., *Q1 2026 review* or your topic), put it in your personal folder, then save to open the editor.

3 Add your first slide

Click **Add slide**. Three slide types appear — pick the one you need:

- **Cover slide** — the title page at the start of the deck (deck name, date, your name). One per deck.
- **Section slide** — a divider between parts of the deck (e.g. *"Coverage"*, *"Disruptions"*). Use sparingly.
- **Content slide** — where a chart + interpretation lives. Most of your deck is content slides.

For this activity, pick **Content slide** — that's the one the next activities fill.

You should now see an empty content slide ready for a visualization and text.

Checkpoint

You should have:

- A new slide deck inside your personal folder, with a clear name
- One empty content slide ready to edit

What's next

Your facilitator will demo how to add a chart and split the slide into chart + text. Then you'll repeat it in **Add a visualization (manually)**.
