Add a visualization (manually)

Activity · Slide Decks · ~15 min

BEFORE YOU START

☐ You've created your slide deck (see *Create your first slide deck*)

☐ You have a saved visualization you want to include

☐ You're in the **Slide Decks** tab inside your deck

What you'll do

Add a saved visualization to a content slide in your deck. The path has a few non-obvious steps the first time — they get fast once you've done it once.

1 Add a content slide

If the deck is empty, click **+ Add slide** at the top, then pick **Content slide** from the three options (Cover / Section / Content).

The slide appears in the deck preview.

2 Open the slide editor

Click on the slide preview. The full editor opens with **Header / Footer** and **Content** tabs in the left panel.

Switch to the **Content** tab. It says *"Click a block on the canvas to edit it"* — the canvas is empty, so you'll add a block first.

3 Add a block, set it to Visualization

Right-click on the empty canvas. A small menu pops up — **Change to / Split / Add**.

Hover **Add** and pick **Row below** (or any of the four directions). A new block appears with **Content type** set to **Text** by default.

In the left panel, switch the **Content type** dropdown from **Text** to **Visualization**. Two buttons now appear: **Select Visualization** and **Create New Visualization**.

4 Pick the saved chart

Click **Select Visualization**. A picker opens — modules on the left, saved viz cards in the middle.

Browse to **M3. Service utilization** (or wherever your chart lives), click the card you want, then click **Select** at the top right. The dialog closes and the chart appears on the slide.

5 Save

Click **Save and close** at the top left of the slide editor. You're back in the deck view, with your chart on slide 1.

Checkpoint

Your slide should now show:

- One of your saved visualizations
- The slide title and date filled in
- The deck is saved

Tips

> **Reuse, don't recreate.** If you've already built a visualization in the **Visualizations** tab, add the existing one — don't rebuild it inside the slide editor.

- If you can't find your chart in the picker: check the **Visualizations** tab and confirm it's saved in a folder you can see. Use the search box at the top of the picker.
- If the chart looks cramped on the slide: that's expected at this stage. The *Edit and finalize* activity covers resizing.
- The block's Content type can also be set to **Text** or **Image** if you want narrative or a static picture instead.

What's next

Move on to **Add a visualization (with the AI Assistant)** — the same task, but as a single prompt.
