Add a visualization (with the AI Assistant)

Activity · Slide Decks · ~15 min

BEFORE YOU START

☐ You've created your slide deck and added a visualization manually (see prior activities)

☐ You have at least one saved visualization in the **Visualizations** tab

☐ Your deck is open — the AI panel on the right is scoped to it

What you'll do

Tell the AI Assistant to add a saved chart to your open deck — in one prompt. No menu navigation, no block-type switch. Same result as the manual path.

1 Ask the AI to add the chart

In the AI panel (right side), type a prompt that names your chart and your intent:

> *"Add the [your chart name] chart to my deck."*

The AI runs its tools, finds the chart, creates a new content slide at the end of the deck, and confirms in the chat. No separate "add to deck" button — the prompt does the whole thing.

2 Check what landed

Look at the deck preview — there should now be a new slide at the end with the chart you named.

Open it and confirm:

- Right chart? (Sometimes the AI grabs a close-but-different one if your prompt is vague.)
- Slide title makes sense?
- Chart renders, not an error?

If anything's off, say so in the same chat: *"That's not the right one — use the regional split instead."* The AI updates the slide.

3 Save

The deck auto-saves as the AI works, but it's worth opening the slide and clicking **Save and close** to confirm.

> **No saved chart of your own yet?** Use this shared example prompt instead: *"Add the quarterly change in service volume chart to my deck."*

Checkpoint

Your deck should now have **two slides**: one chart added manually (previous activity), one added via the AI Assistant. Same chart or different — the point is you've used both paths.

Comparing the two paths

Manual path	AI Assistant path
Add slide → click slide → right-click → Add row → switch Content type → Select Visualization	Type one prompt: *"Add [chart] to my deck."*
Useful when you know exactly which chart, and clicking is faster than typing	Useful when you don't remember the exact name, or want the AI to pick a sensible default
One chart at a time	Can ask for several at once: *"Add the ANC1 and BCG monthly charts."*

Neither is "better." Pick whichever feels faster for the task.

Tips

> **The AI sees what you've saved.** If a chart isn't in your saved Visualizations, the AI can't find it. Save first, then prompt.

- If the AI returns the wrong chart: name it more specifically in your prompt, or include the indicator + region.
- The AI can also create a chart from scratch and add it in one go — *"Make a monthly ANC1 chart and add it to my deck."* This combines the previous module's *Build with AI* with this one.

What's next

Move on to **Edit and finalize your slides** — review and polish what you've built.
