

Add a visualisation (with the AI Assistant)

Activity · Slide Decks · ~15 min

Before you start

- ☐ You've created your slide deck and added a visualisation manually (see prior activities)
- ☐ You have at least one saved visualisation in the **Visualisations** tab
- ☐ The AI Assistant panel is open

What you'll do

Use the AI Assistant to surface a saved visualisation and add it directly to your slide deck — no menu navigation needed. Same **I do / we do / you do** structure as the previous activity.

I do — the facilitator demonstrates

The facilitator types a prompt into the AI Assistant asking for an existing visualisation. When the AI returns it, the facilitator uses the buttons in the chat preview to add the chart directly to the slide deck. Watch the chat preview — that's where the action happens.

We do — together

Try this prompt in the AI Assistant (you can paste it):

Display the quarterly change in service volume visualisation.

The AI should find your saved visualisation and show a preview in the chat. Below the preview, look for buttons to **add the chart to a slide deck** — pick the deck you created.

 AI chat preview with "Add to slide deck" button

You do — on your own

Now do the same with one of **your** visualisations:

1. Prompt the AI: *Display [your visualisation name]*.
2. When the preview appears, click **Add to slide deck**.
3. Pick your deck and the slide you want it on.
4. Save.

Checkpoint

Your deck should now have **two slides**: one chart added manually (previous activity), one added via the AI Assistant. They can be the same chart or different — the point is you've used both paths.

Comparing the two paths

Manual path	AI Assistant path
Browse → Select → Insert	Prompt → Click "Add to deck"
Useful when you know exactly which chart you want	Useful when you don't remember the name or want the AI to surface candidates
One chart at a time	Can ask for multiple charts in one prompt

Neither is "better." Pick whichever feels faster for the task.

Tips

The AI sees what you've saved. If a chart isn't in your saved Visualisations, the AI won't find it. Save first, then prompt.

- If the AI returns the wrong chart: name the chart more specifically in your prompt, or include the indicator + region in the request.
- If the **Add to deck** button doesn't appear: the AI didn't recognise the response as a chart-add request. Try rephrasing (*"Add the ANCI chart to my deck"*).

What's next

Move on to **Edit and finalise your slides** — review and polish what you've built.

 **Verify in your current UI:** the AI chat preview controls may differ. The action (prompt → preview → add to deck) is the same.
