

Create with AI → Verify the output → **Refine** → Peer review

Refine your disruption report

Activity · Disruption Report · ~40 min

BEFORE YOU START

- ☐ Your core report is built and verified
- ☐ You know who the report is for
- ☐ The Prompt library is open

What you'll do

You have the core report. Now make it fit your audience and add any extra sections decision-makers need — by asking the AI for them.

1 Polish what you have

- Apply your formatting (fonts, colors, layout)
- Adjust the language for your **audience** — a minister reads differently from a data team
- Decide which extra sections (below) are worth adding

2 Add extra sections with the AI

In the Prompt library, pick one or both. The AI **appends** the section to your report.

- **Prompt 2 — Regional Disruptions Analysis** — one slide per region, actual vs expected service volume. (*See the methodology recap: Service use.*)
- **Prompt 3 — Data Quality Assessment** — an annex of DQA visualizations and interpretation. (*See the methodology recap: Data quality assessment.*)

3 Check the new sections

Prompt 2 — Regional

- ☐ Summary slide includes all areas
- ☐ One slide per area — none skipped
- ☐ Area names spelled correctly
- ☐ Interpretations match the right area

Prompt 3 — Data quality

- ☐ Annex numbered correctly
- ☐ Completeness, outlier, consistency slides present
- ☐ Colors make sense (green good, red concern)
- ☐ Weak data areas/indicators flagged

Same rule as before. Read every new interpretation as a team — does anything sound wrong or exaggerated?

What's next

Peer review — swap reports with another team and read each other's as a fresh pair of eyes.
