

Verify and explore your setup

Instance Setup · ~10 min

BEFORE YOU START

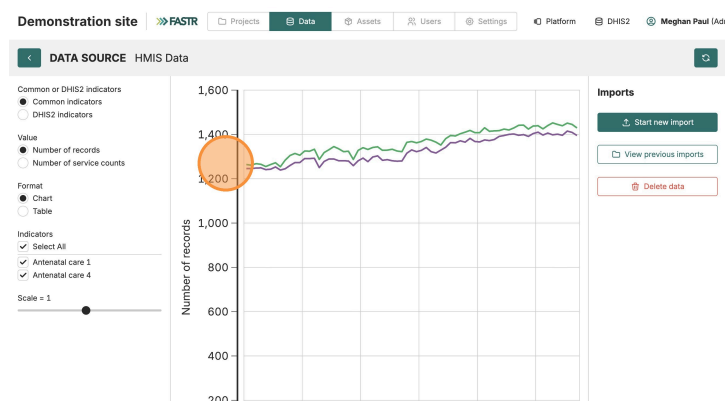

- ☐ You've completed all four previous handouts (connect / facilities / indicators / data)

What you'll do

Spot-check your imported data, learn how to navigate the chart explorer, and confirm everything's ready for analysis modules.

1 View imported data as a chart

On the **HMIS Data** page, your indicators appear as time series. The left panel lists every indicator you imported.

2 Toggle indicators on the chart

In the left panel, **check/uncheck** indicators to show or hide them. Useful when comparing two or three at a time without clutter.

3 Adjust the y-axis scale

Use the **Scale** slider at the bottom to switch between linear and a wider Y-axis when one indicator dominates the others.

4 Spot-check a known value

Pick one period (e.g., last month) and one facility you know well. Mentally compare the FASTR-reported value against what you'd expect from your DHIS2 dashboards.

If they match → you're good. If they're way off → check your indicator mapping (most common cause) before running any analyses.

5 Review import history

Open the Imports page's **History** tab to see every import that's been run, and the HMIS Data page's **Ledger** tab for months of data and last-import date per indicator. Useful for tracking what's loaded and when.

Demonstration site > FASTR > Projects > Data > Assets > Users > Settings > Platform > DHIS2 > Meghan Paul (Admin)

Previous imports

VERSION ID	SOURCE TYPE	DHIS2 FAILURES	DATE DATA WAS IMPORTED	NEW ROWS INSERTED	OLD ROWS UPDATED	TOTAL ROWS INSERTED OR UPDATED
8	DHIS2	0 failures	10/22/2025, 3:34:52 PM	185,382	0	185,382
7	DELETION		10/22/2025, 3:07:18 PM	-25,177	0	-25,177
6	DELETION		10/9/2025, 1:56:52 PM	-8,594	0	-8,594
5	DHIS2	0 failures	10/9/2025, 1:49:58 PM	33,771	0	33,771
4	DELETION		10/9/2025, 1:42:03 PM	-173,245	0	-173,245
3	CSV		10/8/2025, 5:31:14 PM	173,245	0	173,245
2	DELETION		10/8/2025, 5:23:10 PM	-173,245	0	-173,245
1	CSV		10/4/2025, 5:50:28 PM	173,245	0	173,245

Checkpoint

Back on the **Data** page, you should now have:

- ✓ Admin units and facilities (green)
- ✓ Indicators (mapped)
- ✓ HMIS data (loaded with values flowing through time)

You're ready to run analysis modules — data quality, service utilization, coverage estimation, etc.

What could go wrong

- **All values look flat / zero** — the period range may not overlap with when DHIS2 has data. Check your time range and re-import.
- **Some indicators appear, others don't** — mapping was incomplete. Go back to the indicators page and verify every DHIS2 indicator has a common-indicator link.
- **Chart won't load** — try a different browser; FASTR's charts use modern web features that older browsers may not handle.

What's next

Setup complete. An administrator can now **generate a results package** (Results → Generate new results package) so projects can use the data. Then move on to **Getting Started** (M9b) to learn the platform interface in depth.
