

Facilitator guide — FASTR Quiz

Facilitator guide · FASTR Quiz

About this activity

A short, team-based knowledge check on FASTR fundamentals — the framework, the data-quality dimensions, and indicator definitions. Teams may use the AI Assistant to find answers, which doubles as light practice with the tool.

One participant sheet. ~30–45 min. Best as an energiser or a recap near the end.

How to run it

- Put participants in **teams**; one answer sheet per team.
- Run it as a race or a relaxed discussion — your call. Allow the AI Assistant; finding the answer with it is part of the point.
- After each question, reveal the answer and give the one-line reason. Let teams debate before you confirm.
- Keep it light. The goal is to surface and settle misconceptions, not to grade.

Answer key

1. What does FASTR stand for? → B

Frequent Assessments and System Tools for Resilience. Not a "Framework / Registry" — FASTR is about rapid, repeated assessment, not a one-off audit.

2. The 3 data quality dimensions? → C

Outliers, completeness, internal consistency — the three checks the DQA module runs. (A and B mix in terms from other quality frameworks.)

3. The 4 technical pillars? → B

RMNCAH-N service-use analysis (HMIS), facility phone surveys, household/client phone surveys, rapid qualitative studies.

4. 200 ANC1 but 350 ANC4 → A

Consistency. You can't have more 4th visits than 1st visits — ANC1 must be $\geq$ ANC4, so the numbers can't both be right.

5. ANC1 coverage target population → A

Pregnant women (expected pregnancies) — the denominator for first antenatal visit coverage.

Note: the slide for Q1 option B currently reads "Frequent Assessments and Health System Tools for Resilience". The canonical name is "Frequent Assessments and System Tools for Resilience" — worth correcting on the slide.
