

Map your users

Activity · Results Communication · ~20 min

BEFORE YOU START

- ☐ You're working with your country team (this is a discussion activity)
- ☐ You have a recent FASTR output in mind (a chart, a report, a slide deck) that you're planning to share

WHY THIS MATTERS

The same analysis lands very differently depending on who's in the room. A Director of PHC wants the takeaway and a decision; a district analyst wants the underlying data. Mapping your audience before you communicate **changes what you say, how long you say it, and what you cut.**

The worksheet

Fill this in for **one specific audience** you're preparing for — not "everyone".

Question	Your answer
Who is the primary end user of your FASTR outputs?	
What decision or action will they take based on this data?	
What 2-3 pieces of information are they most interested in?	
What format / length works best for this audience?	
When and where will you present to them?	

Worked example

Before you start your worksheet, here's what a filled-in answer looks like:

Question	Example answer
Who?	Director of Primary Health Care, MoH
Decision?	Where to deploy supportive supervision visits this quarter
2-3 things they care about?	(1) Which districts had the biggest drop in ANC1 last quarter, (2) Whether the drop is real or a data issue, (3) Recommended action
Format / length?	One-page brief + 5-minute verbal walk-through
When/where?	Monthly directorate meeting, second Tuesday of the month

Notice: the answer to "what do they care about" is **specific** — not "data quality" but a concrete question with a real next step.

Tips

Specific beats comprehensive. A director rarely needs every chart. They need one chart that prompts one decision.

- If your answer to "decision or action" is vague (e.g., "improve performance"), you don't yet know the audience well enough. Talk to them.
- Different audiences = different outputs from the same analysis. Map each audience separately.

Share with the room

After ~15 min of team discussion, **share one insight** about your audience with the larger group — something you realised that you hadn't noticed before mapping it out.

What's next

The next activities will help you **shape the message** for this audience: writing finding statements, linking results to actions, and planning dissemination.
