

Facilitator guide — Standard FASTR Reports

Facilitator guide · Standard FASTR Reports · NOT FOR DISTRIBUTION

About this activity

Standard FASTR Reports is the set of standard prompts that generate FASTR's GFF reports — the disruption report, regional analysis, and data-quality appendix. The activity below — the **verification reference** — covers how to check a generated report before it leaves the team.

One handout. ~20 min of participant time, as a team.

How to run it

- This is used **after a report has been generated** — the report builder prompts produce the deck, then this handout checks it.
- It is a **team activity**: country teams work the checklist together, with the source charts open on the platform next to the report.
- There is nothing to demo. Your job is to make sure teams actually do **both** verification passes — and do not skip the manual one.

Setting up the build (before verification)

Before participants reach the verification activity, they have built a report using the prompt library. Three facilitator moves make that build go well:

- **Pilot / co-pilot roles.** Pick **one person per team** as the pilot — they run the prompts. The rest of the team observes, suggests corrections, and reviews. Rotate the role if time allows.
- **Define the use case first.** Before opening the prompt library, ask each team to **agree out loud on the use case** — country, period, indicator groupings, who the report is for. Five minutes of group reflection saves thirty minutes of regenerating.
- **Timing reality.** Prompt 1 takes **5–10 minutes** to build the deck slide by slide. **Tell participants not to click during generation** — interrupting can break the flow.

The activity

1. Verifying an AI-generated report

Reference · ~20 min · team

What it is — a reference and team checklist for verifying a generated disruption report.

What the handout covers — the two-pass model (Pass 1: AI self-review via Prompt 5; Pass 2: team review), and section-by-section manual checklists — Section A (general checks), B (base disruption report), and C / D (optional regional and data-quality appendices).

Watch for — teams stop after the AI pass. Prompt 5 only checks the deck against itself and the data; the **manual team review** is what catches what only the country team knows — whether a "disruption" is real or explained by a local event, and whether local context is missing. Make sure both passes

Wrapping up

The sign-off line in the handout is the bar: the team must be able to say every number is checkable, every interpretation reflects what they know, and no claim is unsupported. If they can't, the report isn't ready to leave the room.
