

Facility structure → Indicators → **Data** → Verify

Import HMIS data

Instance Setup · ~15 min + server time

BEFORE YOU START

- ☐ Facilities imported (the Facilities card shows your counts)
- ☐ Indicators imported and mapped (every DHIS2 indicator has a common-indicator link)
- ☐ You've decided which **time period** to pull (e.g., last 36 months — discuss with your team)

What you'll do

Pull the actual data values from DHIS2 for your chosen indicators and time period. This is the largest data operation in the setup — depending on country size, it can take 5–30 minutes to run. The import runs **on the server**, so once it's launched you can close the tab and come back.

1 Open the Imports page

Click **Data** in the top bar, then the **Data** card in the **HMIS** section. Click **Imports**.

The page has three tabs — **Current**, **Future**, **History** — plus the buttons **New DHIS2 import** and **Upload CSV file**. The per-indicator view lives one level up, on the HMIS Data page's **Ledger** tab.

2 Start the wizard

Click **New DHIS2 import**. The wizard has four steps: **Indicators**, **Time**, **Config**, **Review & launch**. It uses the instance's stored DHIS2 connection; there is nothing to type.

No stored connection yet? Set it up once on the **Data** page, **DHIS2 connection** card — it is saved for the whole instance, encrypted, so nobody re-types credentials for every import.

3 Indicators

Tick every indicator you want data for — the top checkbox selects all. Click **Next**.

Import HMIS data from DHIS2

1 Indicators 2 Time 3 Config 4 Review & launch

Select the indicators to import

2 selected indicators

Indicator ID	Label	Type	Defined By
anc1_2	Antenatal care 1	Calculated	pentab
anc4	Antenatal care 4	DHIS2 element	637u025act5
delivery	Institutional delivery	DHIS2 element	m7n03_inbw
pnct1_newborn	Postnatal care 1 (newborns)	DHIS2 element	0K18AJ0N8
pnct1_mother	Postnatal care 1 (mothers)	DHIS2 element	0jargp0nf6
bog	BOD vaccine	DHIS2 element	W6V0Tq0t5
pentat1	Penta vaccine 1	DHIS2 element	0H402N4T7
pentat3	Penta vaccine 3	DHIS2 element	W1210jqrR
opp	Outpatient visit	Sum	branchia2_asthma, chrisc_aer_infection, neoplasms_cancer, y10q4v0j4
anc1_test	ANC test	Calculated	(anc4 / anc1_2)
test_bog	Test BOD	Calculated	bog
test_opp	CPN Test	Calculated	(anc4 / anc1_2)
cancer_cases	Total Neoplasms/Cancer cases	Sum	neoplasms_cancer
chrisc_aer_infections	Total number of chronic Ear infections	Sum	chrisc_aer_infection
branchia2_asthma	Total number of bronchial asthma	Sum	branchia2_asthma
neoplasms_cancer	Neoplasms/Cancer	DHIS2 element	0t4H0y010B

Cancel Next

4 Time

Choose **Now**, then **Next**.

Worth knowing for later: Recurring schedules this import to repeat by itself — for example every month. Once your setup is stable, that's one routine task gone.

5 Config — the period range

Set the **period range** with the two sliders. Be deliberate: 3 years of monthly data ≈ 36 periods $\times$ N facilities, which scales fast. Click **Next**.

6 Review & launch

Check the summary — connection, indicator count, window, and the number of (indicator, month) pairs to fetch. Click **Start import**.

7 Let the server work

The import runs on the server. The **Current** tab shows progress; you can close the tab, work elsewhere, or log off — the import keeps running. The **History** tab tells you when it is done.

Checkpoint

The HMIS Data page now shows your indicators as a chart, with values flowing through time. Its **Ledger** tab lists every indicator with its months of data, when it was last imported, and any failed months.

What could go wrong

- **Some (indicator, month) pairs failed** — the import keeps everything that succeeded; nothing is rolled back. Open the HMIS Data page's **Ledger** tab to see failed months per indicator and retry just those pairs. A few failures usually mean no data exists in DHIS2 for that combination; many failures point to the indicator mapping (see *Import indicators*).

- **Network drops mid-import** — nothing to protect on your side: the fetch runs on the server, not in your browser. Check the History tab later.
- **The window was too narrow** — re-run the wizard with a wider period range. Re-imported months are simply refreshed with the current DHIS2 values.

What's next

Final step: **Verify and explore** — confirm everything looks right and learn how to navigate your data. Then an administrator **generates a results package** so projects can use the new data.
