

Before you begin → 1. Facility structure → 2. Indicators → **3. Data** → 4. Verify

Import HMIS data

Instance Setup · ~25 min

Before you start

- ☐ Facilities imported (admin units page is green)
- ☐ Indicators imported and mapped (every DHIS2 indicator has a common-indicator link)
- ☐ You've decided which **time period** to pull (e.g., last 36 months — discuss with your team)

What you'll do

Pull the actual data values from DHIS2 for your chosen indicators and time period. This is the largest data operation in the setup — depending on country size, it can take 5-30 minutes to run.

Steps

1. Open HMIS Data import

From the **Data** page, click **HMIS Data**, then **New import**.

2. Choose "Import directly from DHIS2"

Same option you used for facilities. Click **Save**.

If you ticked **Save credentials for this session** earlier (in admin areas or indicators), the platform skips the connection form here. Otherwise it shows up now — same fields as before.

3. Select indicators and time range

- Tick every indicator you want data for.
- Set the **time range** with the slider — be deliberate (3 years of monthly data ≈ 36 periods $\times$ N facilities, which scales fast).

Demonstration site > FASTR > Projects > Data > Assets > Users > Settings > Platform > DHIS2 > Meghan Paul (Adm)

DHIS2 Data Selection

Select indicators to import

2 indicators selected Clear selection

✓	INDICATOR ID	LABEL	COMMON IDS
✓	grudkdw9h	Antenatal client 4th visit	anc4
✓	yl2yw27ekR	Antenatal client 1st visit	anc1

Select Period Range

Nov 2024 to Oct 2025

Selected: 2 indicators $\times$ 12 periods = 24 data points to fetch

Save selection

Click **Save selection**.

4. Configure error handling

On the import-config screen, make sure **Abort the entire import attempt** is selected. This guarantees data integrity: if any indicator-period combination fails, the *whole* import is rolled back. You won't end up with half-loaded data.

Click **Start fetching from DHIS2**.

Demonstration site > FASTR > Projects > Data > Assets > Users > Settings > Platform > DHIS2 > Meghan Paul (Adm)

IMPORT IN PROGRESS HMIS Data 1 2 3 4 5 < Prev Next > Discard Import

Data Staging

Ready to fetch data from DHIS2. This will retrieve the selected indicators and periods.

What should happen if any period-indicator combination fails?

☒ Abort the entire import attempt

☐ Keep any period-indicator combinations that succeed, and report the errors

Start fetching from DHIS2

5. Watch progress

A progress indicator shows the running count of fetched indicator-period combinations.

! Don't close the tab. The fetch runs in your browser session.

6. Review the summary

When the fetch finishes, click **Import Summary** to see:

- Source (DHIS2 URL)
- Date
- Successful vs failed fetches
- Total rows waiting for integration

Demonstration site >>>FASTR Projects Data Assets Users Settings Platform DHIS2 Meghan Paul (Ad...

IMPORT IN PROGRESS HMIS Data 1 2 3 4 5 < Prev Next > Discard Import

Import Summary

Source Type: dh192
 Date Imported: 10/22/2025, 3:34:52 PM
 Total Indicator - Period Combos: 149
 Successful Fetches: 149
 Failed Fetches: 0
 Final Staging Row Count: 185382

Period-Indicator Statistics

Period ID	Indicator ID	Records	Total Count
202001	grukdaw19h	1245	16889
202002	grukdaw19h	1245	15789
202003	grukdaw19h	1248	15981
202004	grukdaw19h	1249	15772
202005	grukdaw19h	1241	14993
202006	grukdaw19h	1243	15889
202007	grukdaw19h	1253	14884

7. Integrate

If the summary looks correct, click **Integrate and finalize**. Wait for the integration bar to complete.

8. Clean up

Click **Remove completed upload form** to clear the interface. Your imported data stays in place — you're just hiding the form.

Checkpoint

The HMIS Data page now shows your indicators as a chart, with values flowing through time.

What could go wrong

- **"Failed: X combinations"** — usually means a facility-indicator combination has no data in DHIS2 for that period. If only a few, you can re-import with a narrower set. If many, check your indicator mapping (Phase 3 of *Import indicators*).
- **Browser freezes / tab unresponsive** — large pulls (1000+ facilities × 36 months × 10 indicators) stress the browser. Reduce indicators or shorten the time range and pull in batches.
- **Network drops mid-fetch** — the *abort the entire import* setting protects you here. Re-run with the same selection.

 **Verify in your current UI:** import screens and labels may differ from the screenshots; the flow is the same.

What's next

Final step: **Verify and explore** — confirm everything looks right and learn how to navigate your data.
