

Security, costs, and ownership

How the FASTR platform protects a country's data — and what it takes to run it

»» FASTR Useful Data

Data security

The background is a solid teal color. In the lower right quadrant, there is a large, faint, light teal graphic consisting of several concentric circles. Overlaid on this and the background are several dark teal geometric shapes: a large quarter-circle in the bottom left, a smaller quarter-circle in the top right, and a rectangular shape in the middle right. The text "Data security" is centered in the upper half of the image.

What the platform holds

- **Monthly service totals per facility** — for example, 45 first antenatal visits at one clinic in March
- The **same figures as the DHIS2 reports** the ministry already produces
- **No patient records** — no names, no addresses, nothing individual

Each country is fully separate

Sharing between countries is not restricted — it is **technically impossible**. Each country runs its own installation.

No connection between countries — by design

Who can see what

- The ministry decides **who gets an account**, and each person's role
- Roles set what a person can do — **view, edit, or administer** — and in which projects
- Identity is **re-checked on every request**, not just at login
- Only a **small, named group of administrators** can change the setup

How the data is protected

The platform checks who you are at every step, makes everything unreadable while it travels, and keeps automatic backup copies.

Three checks stand between a user and the data

Separately: protection against loss

The database is backed up every 30 minutes, the full installation daily — if a server fails, everything can be rebuilt

What the AI can see

Aggregated totals only — the numbers a user could already see on screen, within that user's permissions.
Never the underlying rows.

Costs and ownership

The background of the slide is a solid teal color. On the right side, there are several overlapping geometric shapes. These include two large quarter-circles, one in the upper right and one in the lower right, both in a slightly darker shade of teal. Overlaid on these and extending towards the center are two sets of concentric circles. One set is centered near the bottom right, and the other is slightly higher and further to the right. The circles are thin and light teal, creating a subtle pattern.

Running costs

Three lines: **server hosting** (fixed), **AI use** (metered), **support** (shared team). No per-user fees.

No license fee per person — adding users costs nothing extra

Hosting — today and tomorrow

- Hosted **centrally today**, while the platform is in active development — every country receives fixes and new features the same day
- Built **portable**: the same platform can run on a ministry's own servers
- **Moving later requires no rebuild** — the same software runs in either place

The path to country ownership

The essentials

- **Monthly totals only** — never patient records
- **One installation per country** — no pathway between countries
- **Three known cost lines** — hosting, metered AI, support; no per-user fees
- **Country hosting by 2030** — the stated transition goal
