

Link your results to actions

Activity · Results Communication · ~20 min

BEFORE YOU START

- ☐ You have **at least three findings** from your FASTR analysis written up (finding statements from the previous activity)
- ☐ You've thought about your audience (user mapping activity)
- ☐ A peer country team is available to give you feedback at the end

WHY THIS MATTERS

A finding is just an observation until someone *does something* about it. This activity makes each finding **actionable** — by naming a specific decision-maker, a concrete next step, and a realistic timeline. A finding without a decision-maker drifts. A finding with "Director of PHC, by end of next quarter" gets followed up on.

The worksheet

For your **top 3 findings**, fill in this table:

Finding	Who needs to know?	What decision / action?	By when?
1.			
2.			
3.			

Guidance — be specific

Specific to one person, one action, one date. Vague entries die in inboxes; specific ones get followed up on.

- **"Who needs to know?"** — *not* "the ministry", *yes* "Director of PHC" or "Health Programs Manager at the State MoH".
- **"What decision / action?"** — *not* "improve performance", *yes* "conduct supportive supervision visits in District X next quarter".
- **"By when?"** — a real date, not "soon". Tie it to an existing meeting or cycle if possible.

Three spheres of influence

When you choose what to put in the "What decision / action?" column, point your actions at what you can actually move. The framework divides the world into three concentric circles:

- **Sphere of control** — Actions your team can take directly (default tracing, register reviews, outreach coordination). These belong in the worksheet.
- **Sphere of influence** — Actions requiring partners or higher-level authority (engaging partners, securing supplies, advocating for policy change). These belong in the worksheet too — with a named decision-maker outside your team.
- **Sphere of concern** — Broader systemic factors (national policy, financing, demographics). Note them as context, but don't write them as action steps you'll own.

Rule of thumb: if you can't name one person who can act on it, it probably belongs in the sphere of concern — not the worksheet.

The wider picture

This worksheet asks three questions: **what action**, **who needs to know**, and **by when**. Three more questions complete the picture — what problems the data showed, what constraints exist, how you'll disseminate — and you'll answer those in your **country action plan**.

Worked example

Finding	Who?	What?	By when?
ANC1 dropped 18% in Northern Region Q1 2026 vs Q1 2025	Director of PHC, MoH	Brief Director on the finding + recommend supportive supervision visits in 3 districts with the biggest drops	Before next directorate meeting (15 June)
Pental completeness < 60% in 4 districts	Data Manager, State MoH	Schedule a data quality workshop with the 4 districts to identify reporting bottlenecks	End of Q2 (30 June)
BCG coverage above 100% in 2 districts	Surveillance team lead	Investigate denominator (population estimate may be outdated)	Before the next quarterly review

Notice each row names one person, one concrete action, one date.

Pitfalls to avoid

- **"Share with stakeholders"** is not an action. Stakeholders is plural and vague. Pick one stakeholder, give them one ask.
- **"Improve data quality"** is not an action. Pick a specific intervention (training, supervision, system fix) and a target.
- **"As soon as possible"** is not a timeline. If you can't tie it to a date, the action isn't real yet.

Peer review

Swap your worksheet with another country team. Ask them:

- Are the decision-makers specific (one person, not a group)?
- Are the actions concrete (something you could check is done or not)?
- Are the timelines realistic for the country context?
- Where is the weakest row, and why?

What's next

Action-linked findings feed directly into your **country action plan** — the next activity. You'll take this list and turn it into a sustained quarterly rhythm.
