

Create deck → Add manually → **Add with AI** → Edit & finalise

Add a visualisation (with the AI Assistant)

Activity · Slide Decks · ~15 min

BEFORE YOU START

- ☐ You've created your slide deck and added a visualisation manually (see prior activities)
- ☐ You have at least one saved visualisation in the **Visualisations** tab
- ☐ The AI Assistant panel is open

What you'll do

Use the AI Assistant to surface a saved visualisation and add it directly to your slide deck — no menu navigation needed. Your facilitator has just demonstrated this; now do it yourself.

Steps

1. In the AI Assistant, type a prompt naming one of **your** saved visualisations: *Display [your visualisation name]*.
2. The AI finds the chart and shows a preview in the chat.
3. Below the preview, look for the button to **add the chart to a slide deck** — pick the deck you created.
4. Save.

No saved chart of your own yet? Use this shared example prompt instead: *Display the quarterly change in service volume visualisation.*

The screenshot shows the FASTR AI Assistant interface. On the left, there's a 'New slide' preview showing a line chart titled 'ANC1 Actual vs Expected Service Volume (National)'. The chart displays a fluctuating line with a red shaded area. The right panel shows the AI chat interface with a 'Content' dropdown and a 'New slide' button. The chat history includes the following messages:

- AI:** Add the ANC1 actual vs expected service volume (National) chart to this slide.
- User:** Let me first check the current state of the slide and find the right visualization/metric to use.
- AI:** Retrieved slide
- AI:** Retrieved 36 metric(s)
- AI:** I can see the metric I need: m3-02-01 (Actual vs expected service volume [National]) with the disruption-chart preset. Let me also check the module settings to confirm the right count variable, and I'll get the metric data to confirm ANC1 is available.
- AI:** Retrieved data for metric m3-02-01
- AI:** ANC1 data is confirmed. Now I'll update the slide to replace the empty text block with the ANC1 actual vs expected chart.
- AI:** Updated 1 field(s)
- AI:** The ANC1 Actual vs Expected Service Volume (National) chart has been added to the slide. It uses the disruptions-and-surpluses chart preset, filtered to ANC1, showing actual vs model-predicted expected volumes over time (Jan 2022 - Apr 2025). Click **Save** when you're happy with it!

At the bottom of the chat panel, there's a text input field labeled 'Ask about this slide...' and a 'Submit' button.

Checkpoint

Your deck should now have **two slides**: one chart added manually (previous activity), one added via the AI Assistant. They can be the same chart or different — the point is you've used both paths.

Comparing the two paths

Manual path	AI Assistant path
Browse → Select → Insert	Prompt → Click "Add to deck"
Useful when you know exactly which chart you want	Useful when you don't remember the name or want the AI to surface candidates
One chart at a time	Can ask for multiple charts in one prompt

Neither is "better." Pick whichever feels faster for the task.

Tips

The AI sees what you've saved. If a chart isn't in your saved Visualisations, the AI won't find it. Save first, then prompt.

- If the AI returns the wrong chart: name the chart more specifically in your prompt, or include the indicator + region in the request.
- If the **Add to deck** button doesn't appear: the AI didn't recognise the response as a chart-add request. Try rephrasing (*"Add the ANC1 chart to my deck"*).

What's next

Move on to **Edit and finalise your slides** — review and polish what you've built.
