

Create deck → Add manually → **Add with AI** → Edit & finalise

Add a visualisation (with the AI Assistant)

Activity · Slide Decks · ~15 min

BEFORE YOU START

- ☐ You've created your slide deck and added a visualisation manually (see prior activities)
- ☐ You have at least one saved visualisation in the **Visualisations** tab
- ☐ The AI Assistant panel is open

What you'll do

Use the AI Assistant to surface a saved visualisation and add it directly to your slide deck — no menu navigation needed. Your facilitator has just demonstrated this; now do it yourself.

Steps

1. In the AI Assistant, type a prompt naming one of **your** saved visualisations: *Display [your visualisation name]*.
2. The AI finds the chart and shows a preview in the chat.
3. Below the preview, look for the button to **add the chart to a slide deck** — pick the deck you created.
4. Save.

No saved chart of your own yet? Use this shared example prompt instead: *Display the quarterly change in service volume visualisation.*

The screenshot shows the FASTR AI Assistant interface. On the left, there's a slide preview titled 'New slide' with the subtitle 'ANC1 Actual vs Expected Service Volume (National)'. The slide content area shows a line chart with a red shaded area. On the right, the AI Assistant chat panel is open, showing a conversation where the user asks to display a specific visualisation, and the AI responds with a preview and a button to add the chart to a slide deck. The chat history shows the AI retrieving the slide and confirming the data.

Checkpoint

Your deck should now have **two slides**: one chart added manually (previous activity), one added via the AI Assistant. They can be the same chart or different — the point is you've used both paths.

Comparing the two paths

Manual path	AI Assistant path
Browse → Select → Insert	Prompt → Click "Add to deck"
Useful when you know exactly which chart you want	Useful when you don't remember the name or want the AI to surface candidates
One chart at a time	Can ask for multiple charts in one prompt

Neither is "better." Pick whichever feels faster for the task.

Tips

The AI sees what you've saved. If a chart isn't in your saved Visualisations, the AI won't find it. Save first, then prompt.

- If the AI returns the wrong chart: name the chart more specifically in your prompt, or include the indicator + region in the request.
- If the **Add to deck** button doesn't appear: the AI didn't recognise the response as a chart-add request. Try rephrasing (*"Add the ANCI chart to my deck"*).

What's next

Move on to **Edit and finalise your slides** — review and polish what you've built.

 **Verify in your current UI:** the AI chat preview controls may differ. The action (prompt → preview → add to deck) is the same.
