

Facilitator guide — Getting Started

Facilitator guide · Getting Started

About these activities

Getting Started gets every participant onto the platform and set up to keep their work organised. It is **short** — one facilitator-led demo, then two quick activities.

Three handouts. ~15 min of participant time, plus a ~10 min demo. The blockers here are accounts and access, not skills.

How to run it

- Start with the **platform demo** — that's the appendix at the end of this guide.
- Then participants log in and create their folders.
- **Sort out accounts and project access before the session if you can.** The most common time sink here is verification emails and un-approved accounts — none of which participants can fix themselves.

The activities

1. FASTR platform demo

Demo · facilitator-led · ~10 min

What it is — a facilitator-led orientation tour of the platform's five main tabs, before participants log in themselves.

What the handout covers — a do / say script for the Data, Visualizations, Slide Decks and AI Assistant tabs, plus common Q&A and a screenshot-based backup plan. *Full demo script in the appendix below.*

Watch for — keep it short and high-level; the script repeatedly warns against going deep (no live AI prompt, no setup detail). The recurring participant question is *"is this the same as DHIS2?"* — have an answer ready.

2. Log in to the platform

Activity · ~10 min

What it is — the first hands-on activity: participants create an account and enter their country project.

What the handout covers — open the country URL, sign up or sign in, verify the email, log in, and click into the country's project on the Projects tab.

Watch for — verification emails landing in spam, and "account not approved" / missing project. Both need **you** to grant project access or re-trigger the email — pre-empt these before the session starts.

3. Create your user folder

Activity · ~5 min

What it is — a short setup activity to create personal folders so workshop output stays organised.

What the handout covers — create one folder named after the participant in the Slide Decks tab, and another with the **identical name** in the Visualizations tab.

Watch for — "+ New folder" only appears in the **"By folder"** view; the name must match exactly across both tabs. Discourage generic names like "test" — they make work impossible to find later.

Wrapping up

Every participant should leave these activities logged in, inside their country project, with a named folder in both tabs. Anyone who isn't will be stuck for the rest of the workshop — check before moving on.

Appendix — FASTR platform demo script

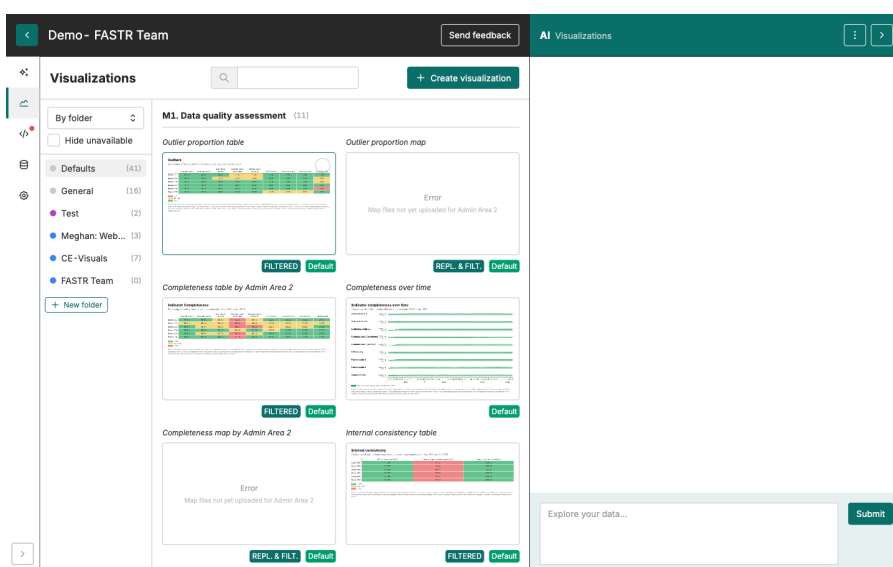

A quick orientation tour of the FASTR Analytics Platform — enough that participants know what they're looking at when they log in next. This is **before** they touch their own keyboards. Keep it short and high-level; details come in the hands-on activities.

Setup checklist

- ☐ Browser logged in to your country instance, with a demo project loaded
- ☐ Main tabs visible: Data, Visualizations, Slide Decks, Reports, AI Assistant
- ☐ At least one analysis already run, so charts/outputs are visible
- ☐ Screen-share working if remote
- ☐ Have the participant *Logging in* handout ready to hand out after this demo

Step 1: The platform at a glance

- **Do:** Show the landing screen with the main navigation across the top.
- **Say:** *"This is your country's instance of FASTR. Everything you'll see today happens here — there's no separate software to install."*

- **Watch for:** Participants asking "is this the same as DHIS2?" — answer: *"No. FASTR reads from DHIS2 but adds analysis, visualization, and reporting on top."*

Step 2: Data tab (where your facility data lives)

- **Do:** Click the **Data** tab. Show **Structure & maps** (admin areas + facilities) and **HMIS Data**.
- **Say:** *"This is where your country's data is stored. We'll fill this in tomorrow during the Instance Setup activity."*
- **Watch for:** Don't go deep here — just orient. Detailed setup is its own session.

Step 3: Visualizations tab
