

Create deck → Add manually → **Add with AI** → Edit & finalise

Add a visualisation (with the AI Assistant)

Activity · Slide Decks · ~15 min

BEFORE YOU START

- ☐ You've created your slide deck and added a visualisation manually (see prior activities)
- ☐ You have at least one saved visualisation in the **Visualisations** tab
- ☐ The AI Assistant panel is open

What you'll do

Use the AI Assistant to surface a saved visualisation and add it directly to your slide deck — no menu navigation needed. Your facilitator has just demonstrated this; now do it yourself.

Steps

1. In the AI Assistant, type a prompt naming one of **your** saved visualisations: *Display [your visualisation name]*.
2. The AI finds the chart and shows a preview in the chat.
3. Below the preview, look for the button to **add the chart to a slide deck** — pick the deck you created.
4. Save.

No saved chart of your own yet? Use this shared example prompt instead: *Display the quarterly change in service volume visualisation.*

The screenshot shows the FASTR AI Assistant interface. On the left, there's a slide preview titled 'New slide' with the subtitle 'ANC1 Actual vs Expected Service Volume (National)'. The slide content area shows a line chart with a red shaded area. On the right, the AI Assistant chat panel is open, showing a conversation where the user asks to display a specific visualisation, the AI finds it, and then adds it to the slide deck. The chat history includes prompts like 'Add the ANC1 actual vs expected service volume (National) chart to this slide.' and responses from the AI assistant.

Checkpoint

Your deck should now have **two slides**: one chart added manually (previous activity), one added via the AI Assistant. They can be the same chart or different — the point is you've used both paths.

Comparing the two paths

Manual path	AI Assistant path
Browse → Select → Insert	Prompt → Click "Add to deck"
Useful when you know exactly which chart you want	Useful when you don't remember the name or want the AI to surface candidates
One chart at a time	Can ask for multiple charts in one prompt

Neither is "better." Pick whichever feels faster for the task.

Tips

The AI sees what you've saved. If a chart isn't in your saved Visualisations, the AI won't find it. Save first, then prompt.

- If the AI returns the wrong chart: name the chart more specifically in your prompt, or include the indicator + region in the request.
- If the **Add to deck** button doesn't appear: the AI didn't recognise the response as a chart-add request. Try rephrasing ("Add the *ANC1* chart to my deck").

What's next

Move on to **Edit and finalise your slides** — review and polish what you've built.

 **Verify in your current UI:** the AI chat preview controls may differ. The action (prompt → preview → add to deck) is the same.
